protease inhibitors of the invention, and include oligonuclecting the sequences used in the isolation and characterisation of the protease primers AAC97535 - AAC97573 and AAC9582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors. Peptide sequences AAB53089 - AAB53122 represent the protease inhibitors. Peptide sequences various other peptides used in the isolation of the protease inhibitors and various other peptides used in the isolation of the protease inhibitors. The protease inhibitors protease inhibitors protease inhibitors protease inhibitor protein; useful for treating a protease mediated condition, which includes protease mediated tissue destruction, e.g. emphysem, arthritis, glomerulonephitis, muscular dystrophy or tumour invasion. It is also useful for modulating protease activity. The DNAs are useful for producing the proteins, especially by recombinant methods.
This invention relates to new purified and isolated mammalian serine protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97526 - AAC97534, AAC97574 - AAC97581 and AAC97614 - AAC97641 represent DNA encoding the

                                                                                                                                                                                                            This invention relates to new purified and isolated mammalian serine protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting cympotrypsin and elastase Sequences AAC97534.

AAC97574 - AAC97581 and AAC97614 - AAC97641 represent DNA encoding the protease inhibitors of the invention, and include oligonucleotide sequences used in the isolation and characterisation of the proteins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                various other peptides used in the isolation of the protease inhibitors. The protease inhibitors have cytostatic and anti-inflammatory activity. The serine protease inhibitor protein is useful for treating a protease-mediated condition, which includes protease mediated tissue destruction, e.g. emphysem, arthritis, glomerulonephritis, periodontitis, muscular dystrophy or tumour invasion. It is also useful for modulating protease activity. The DNAs are useful for producing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       63 AAGCCAGGITCITGICCIAITAICITGAITCGITGCGCIAIGITAAACCCACCIAACCGI 122

This invention relates to new purified and isolated mammalian serine protease inhibitors proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97526 - AAC97534. AAC97581 and AAC97614 - AAC97641 represent DNA encoding the sportease inhibitors of the invention, and include oligonucleotide sequences used in the isolation and characterisation of the proteins. Primers AAC97535 - AAC97573 and AAC9582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors. Peptide sequences AAB5302 represent the protease inhibitors of the invention and various other peptides used in the isolation of the protease inhibitors. The protease inhibitors have cytostatic and anti-inflammatory activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The serine protease inhibitor protein is useful for treating a protease-mediated condition, which includes protease mediated tissue destruction, e.g. emphysema, arthritis, glomerulonephritis, periodontitis, muscular dystrophy or tumour invasion. It is also useful for modulating protease activity. The DNAs are useful for producing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     63 AAGCCAGGTTCTTGTCCTATTATCTTGATTCGTTGCGCTATGTTAAACCCACCTAACCGT 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                                                                        The invention relates to a DNA sequence encoding an analog of a mammalian serine protease inhibitor protein. The analog comprises at least eight eysteine residues and possesses serine protease inhibitor activity, and at least one operational element consisting of a promoter, an operator, a leader sequence, a Shine-Dalgarno sequence, a ribosome binding site or a terminator codon. The DNA is useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, e.g. leukocyte elastase or trypsin. The present sequence represents the coding strand of a DNA that directs the manufacture of a recombinant
                                                                                                                                                                                                                        New DNA sequences, useful in recombinant DNA techniques for directing
the production of a serine protease inhibitor protein, e.g. leukocyte

The invention relates to a DNA sequence encoding an analog of a mammalia serine protease inhibitor protein. The analog comprises at least eight oysterine residues and possesses serine protease inhibitor activity, and at least one operational element consisting of a promoter, an operator, a leader sequence, a Shine-Dalgarno sequence, a ribosome binding site or a terminator codon. The DNA is useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, e.g. leukocyte elastase or trypsin. The present sequence represents the coding strand of a DNA that directs the manufacture of a recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Serine protease inhibitor; human; emphysema; arthritis; peridontitis; muscular dystrophy; tumour invasion; glomerulonephritis; sepsis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA sequences, useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, e.g. leukocyte elastase or trypsin -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAGCCAGGTTCTTGTCCTATTATCTTGATTCGTTGCGCTATGTTAAACCCACCTAACCGT 122

The present invention describes a DNA sequence (A) encoding an analogue of a mammalian serine protease inhibitor (B). The DNA sequences and recombinant methods allow manufacture of a class of inhibitors of e.g. cathepsin G, elastase, and trypsin, with different specificities. The recombinant serine protease product can be directed to act intracellularly or extracellularly and is useful in treating conditions caused by a disturbance in the native protease/protease inhibitor balance such as emphysema, arthritis, glomerulomephritis, peridontitis, muscular dystrophy, tumour invasion, sepsis, and acute leukemia. (A) burities so as to provide economical pharmaceutical compositions (B) is thermodynamically stable in extracellular conditions, and exhibits a high degree of self assembly forming an active textiary structure in the absence of blochemical stimuli. The present sequence represents the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            63 AAGCCAGGTTCTTGTCCTATTATCTTGATTCGTTGCGCTATGTTAAACCCACCTAACCGT 122

This invention relates to new purified and isolated mammalian serine protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97534.

AAC9754 - AAC97531 and AAC97614 - AAC97614 represent DNA encoding the protease inhibitors of the invention, and include oligonucleotide of sequences used in the isolation and characterisation of the proteins. Primers AAC97535 - AAC97533 and AAC975582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors. Peptide sequences CC AAB33102 represent the protease inhibitors. Peptide sequences CC AAB33102 represent the protease inhibitors of the invention and various other peptides used in the isolation of the protease inhibitors have cytostatic and anti-inflammatory activity. The serine protease inhibitor protein is useful for treating a protease enhibitor protein is useful for treating a content and secular dystrophy or tumour invasion. It is also useful continis, muscular dystrophy or tumour invasion. It is also useful continied in the invention in the invention of the protease activity. The DNAs are useful for producing the continied in the invention of the protease activity. The DNAs are useful for producing the continied in the invention of the protease activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 123 TGTTTGAAGGACACTGATTGTCCAGGTATCAAAAGTGCTGTGAAGGTTCCTGCGGTATG 182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           63 AAGCCAGGITCTIGICCTAITAICTIGAITCGITGCGCIAIGITAAACCCACCTAACCGI 122

The analog comprises at least eight cysteine residues and possesses serine protease inhibitor activity, and at least one operational element consisting of a promoter, an operator, a leader sequence, a Shine-Dalgarno sequence, a ribosome binding site or a terminator codon. The DNA is useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                e.g. leukocyte elastase or trypsin. The present sequence represents the DNA sequence coding for ompA-tc-met-secretory leukocyte protesse
                                                                                                                                                                                                                                                                                                                      the production of a serine protease inhibitor protein, e.g. leukocyte elastase or trypsin

purities so as to provide economical pharmaceutical compositions. (B) is resistant to heat, acid, and a variety of proteolytic enzymes, is thermodynamically stable in extracellular conditions, and exhibits a high degree of self assembly forming an active tertiary structure in the absence of blochemical stimuli. The present sequence represents the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of a mammalian sering processe inhibitor (B). The DNA sequences and recombinant methods allow manufacture of a class of inhibitors of e.g. cathepsin G, elastase, and trypsin, with different specificities. The recombinant serine protease product can be directed to act intracellularly or extracellularly and is useful in treating conditions caused by a disturbance in the native protease/protease inhibitor balance such as emphysema, arthritis, glomerulonephitis, peridontiis, muscular dystrophy, tumour invasion, sepsis, and acute leukemia. (A) allows (B) to be recombinantly produced in sufficient quantities and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a DNA sequence (A) encoding an analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TGTTTGAAGGACACTGATTGTCCAGGTATCAAAAGTGCTGTGAAGGTTCCTGCGGTATG 182

This invention relates to new purified and isolated mammalian serine protease inhibitor proteins which comprise at least 8 cysteine residues and no more than 107 amino acids. The protease inhibitors are capable of inhibiting chymotrypsin and elastase. Sequences AAC97526 - AAC97531, AAC97574 and AAC97641 represent DNA encoding the protease inhibitors of the invention, and include oligonucleotide protease unbibitors of the invention, and include oligonucleotide requences used in the isolation and characterisation of the proteins. Finers AAC97535 - AAC97537 and AAC95582 - AAC97613 are used in the construction of DNA encoding the protease inhibitors of the invention and various other peptides used in the isolation of the protease inhibitors have cytostatic and anti-inflammatory activity. The protease inhibitors protein is useful for treating a protease inhibitor protein is useful for treating a protease inhibitor protein is useful for treating a protease acidited condition, which includes protease mediated tissue destruction, e.g. emphysema, arthritis, glomerulonephritis, producing the proteins eared and proteins muscular dystrophy or tumour invasion. It is also useful represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63 AAGCCAGGTTCTTGTCCTATTATCTTGATTCGTTGCGCTATGTTAAACCCACCTAACCGT 122

Example 3; Column 36; 37pp; English.

The invention relates to a DNA sequence encoding an analog of a mammalian serine protease inhibitor protein. The analog comprises at least eight cysteine residues and possesses serine protease inhibitor activity, and at least one operational element consisting of a promoter, an operator, a leader sequence, a Shine-Dajarno sequence, a ribosome binding site or a terminator codon. The DNA is useful in recombinant DNA techniques for directing the production of a serine protease inhibitor protein, .g. leukocyte elastase or trypsin. The present sequence represents the NA sequence coding for ompA-secretory leukocyte protease inhibitor

                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel annibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruqinosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ..

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the companies. Their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are setherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella premunoniae, Pseudomonasa aeruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

Con essential prokaryotic cellular proliferation protein.

Con essential prokaryotic cellular proliferation protein.

(1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, then may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polymucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein (1) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic concers may represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK5492 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; SEQ ID NO 20301; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1)
amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
compression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and canner metatesases of haematopoietic decisions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              to AAK87694 represent human immune/heematopoietic antigen genomic sequences from the present invention. AAK84942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 41861; 3071pp + Sequence Listing; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                   prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            60 ACTAAGCCAGGTTCTTGTCCTATTATCTTGATTCGTTGCGCTATGTTAAACCCACCTAAC 119

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The disquesis, treatment and prevention of: (a) cancer, e.g. breast on the disquesis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone warrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune characters e.g. Addison's disease, allergies, autoimmune contiss, (c) cardiovascular disorders such as mycoardial ischaemias; (c) cardiovascular disorders such as mycoardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections.

CC (d) wound healing; (e) neurological diseases such as viral, bacterial, fungal and parasitic infections.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1085 GITCTGGITCTAGGICAAGGCACAAATAGIGTATTITCATTTTCCTGITCTACATGCTTA 1026

Costeoblast formation or osteoporosis; or osteoblast formation or osteoporosis; or costeoblast formation or osteoporosis; or costeoblast formation or osteoporosis; or costeoblast formation or osteoporosis; or conditions or monitoring the progression of bone tissue deposition.

Specific conditions include postmenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteodystrophy, drugal-induced abnormalities in bone formation or bone loss, conditions that involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated CDNA marker of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip. wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Db 63709 AGACCCTGTCTCTACAAAAATAAAATTAGATGAGATTTGAGGTTACGTTGAGCTATGAT 63768
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of genes and their expression profiles associated with osteoblast differentiation for screening modulators bone formation, for diagnosing or treating e.g. osteoporosis, or as markers for the differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 47 AGGICCIGIGICIACIAAGCCAGGIICTIGICCIAITAICITGATICGIIGCGCIAIGII 106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to genes and their expression profiles are used
                                         Human; osteoblast; stem cell differentiation; bone tissue deposition;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (a) screening modulators of precursor stem cell differentiation into osteoblasts, or bone tissue deposition;
(b) diagnosing abnormal deposition of bone tissue, abnormal rate of

                                                                                                                                                                                                                                                                                                  The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and cenomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; secreted protein; gene therapy; vaccine; treatment; diagnosis;

The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GENSET or by supplementing the patient's genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression by binding with the cells' own genes and preventing that expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the used as DNA probes in diagnostic assays to detect and quantitate the used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to detentine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and activity. The present eventual and activity. The production of antibodies and in assays modulators (agonists and activity. The

                                                                                                      The present sequence is the gene for a human kinase, which is related to the homeodomain-interacting protein kinase subfamily. The kinase and its DNA sequence can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. Experimental data indicates expression of the human kinase in testis, brain medulloblastomas, infant brain, schizophrenic brain, retina, germinal center B cells, colon and liver. The human kinase gene is
                        Human kinase protein, related to homeodomain-interacting protein kinase subfamily, useful as a model for developing human therapeutic targets and serves as a target for human therapeutics

purines/pyrimidines/nucleosides/nucleotides, DNA replication/transcription/translation, or is a transport/binding protein. (A) are produced that correspond to the 3'-end of mRNA but without the polyA tail. They can be prepared more efficiently and with less effort than conventional libraries. AAK53436-AAK54275 represent fragments of the gene library described in the method of the invention.

The polynucleotides and gene products are useful for treating or diagnosing tumnour or cancer (e.g. prostate cancer, breast cancer, lung cancer or medullary carcinoma) in a subject (e.g. cattle, dogs, also useful as vaccines for treating or preventing these diseases. The polynucleotides are useful for gene therapy. The present sequence is that of one of a group of polynucleotides (ABO88745-ABQ90015) disclosed polynucleotide sequences of the invention. However only 1271 polynucleotide sequences are given, whereas 1477 polynucleotides and 91 proteins are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed

             from an animal to diagnose Staphylococcus infections. The polypeptides are also used in vaccines to elicit protective antibodies in an animal to a member of the Staphylococcus genus and for preventing or attenuating an infection caused by a member of the Staphylococcus genus e.g wound infection, cellulitis, burn infection, eyelid infection, food poisoning, joint infection, neonateal conjunctivitis, osteomyelitis, skin infection, scaled skin syndrome (also known as toxic epidermal neorosis, Ritter's disease and Lyell's disease), toxic shock syndrome and endocarditis. The polynucleotides may also be used in vaccines and for preventing or attenuating a Staphylococcus infection. Antibodies to the polypeptides may be used to purify, detect and target the polypeptides in in vitro and in vivo diagnostic and therapeutic methods.
used to detect anti-Staphylococcus antibodies in a biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Carr GJ;

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential comparation of proteins. The prokaryotes used are Bacherichia coll, Staphylococus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to soreen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

       The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel annibiotics, the essential genes themselves and the discovery of novel annibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Bscherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella Inventionias areupinosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen a wide variety of organisms. The present sequence encodes an essential prockaryotic cellular proliferation protein.

So where the printed specification, but was obtained in electronic for the printed specification, but was obtained in electronic for the control of the printed specification, but was obtained in electronic

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) collynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cancers and cancer metastases of hematopoietic-derived cells. AAK64703 concers and cancer metastases of hematopoietic antigen genomic construction the present invention. AAK64950 and AAM82169.
                                                                                                                                                                                                                                                                                                        sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9370 gcricartritraaridegerrertraarrecagariatraeaccritaearecagaerr 9429

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 23387; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynuclectides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations of deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent,

The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            binding factors, basic helix-loop, helix zipper, homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and EREBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements

sequence (ABA90221) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of woment and composition of woments.

The present invention is related to a Lactococcus lactis nucleotide

production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent
WO200177334 (published 18-OCT-2001) which is available in electronic
format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

Incleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contracting the probes with a collection of detectably labelled nucleic acids the probes with a collection of detectably labelled nucleic acids carived from mRNA of human breast. And then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence at a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the contraction, but was obtained in electronic format directly contraction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Single exon nucleic acid probes for analyzing gene expression in human

                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Probe #2168 for gene expression analysis in human cervical cell sample.

The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa calls. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             77 ICCIATTATCTTGATTCGTTGCGTATGTTAAACCCACCTAACCGTTGTTGAAGGACAC 136
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         293 recreating and an arrange of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Probe #2275 used to measure gene expression in human placenta sample.

                                                                                                                                                                               The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for prodicting a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    single exon nucleic acid probe used to measuring gene expression

The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe breast. The probes at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, discorders of development, inflammatory diseases of the breast, fibrocytic changes, proliferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; pulmonary hypertension; hypertension; hypline membrane disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             293 iccircrirccacagarraridecrecrecrecrecericaricatearagaaragaaageerg 352

probes, Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acide expressed in the human lung; measuring gene expression in a cample derived from human lung; measuring gene expression in a sample derived from human lung; comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung comprising of a collection of detectably labeled nucleic acids derived from human lung cample array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, and (b) detecting specific hybridisation of detectably captured fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon microarray; having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases (COPD), interstital lung disease (LLD), familial idiopathic pulmonary disease. Hermannsky-pulmake syndrome, sarcoideds, pulmonary disease. Hermannsky-pulmake syndrome, sarcoideds, pulmonary diseases. Niemann-Pick disease. Hermannsky-pulmake syndromes and succession of the exons in the strain of the exons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ·

differentially expressing a number course sequence miles in the sequence and the expression levels in normal cells. The nucleotide sequence can be used as a source to primers and probes. The nucleotide sequence can be used as a source the phenotype of a cell by detecting the differential expression of the sequence relative to a normal cell. The probes derived from the sequence and also be used to determine the phenotype of cells in a sample. Probes and antibodies which hybridise to the nucleotide sequence can also be used to determine the phenotype of a cell. The primers are useful for used to determine the phenotype of a cell. The primers are useful for detecting a mutation in a test nucleotide sequence and also for detecting by the nucleotide sequence can also be used in a method to detect colon cancer. The diagnostic method is non-invasive and accurate for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diabetes; allergy; asthma; neurodegenerative disease; Crohn's disease; Alzheimer's disease; Parkinson's disease; liver fibrosis; tumour; coagulation disorder; haemophilia; inflammatory disorder; ulcer; tissue regeneration; wound healing; haematopoiesis; myeloid deficiency; lymphoid cell deficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, ss, gene, secreted protein, immune deficiency, viral infection, bacterial infection, fungal infection; autoimmune disorder, burn, rheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                The invention relates to 625 polymucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them.

C Also included are a vector comprising the polymucleotide, a host cell transformed with the vector, the proteins encoded by the conjunction of the proteins and identification of modulators of the proteins or the expression of the polymucleotides.

CC modulators of the proteins or the expression of the polymucleotide.

CC modulators can lso be used as probes for the identification of the polymucleotides can be used as probes for the identification.

CC and isolation of full length cDNA and genomic DNA. The polymucleotides and isolation of full length cDNA and genomic PNA. The protein cs useful in the treatment of various immune deficiencies and disorders (e.g. theumatoid arthritis, multiple sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating conditions (e.g. asthma). They are also useful for treating diseases, parkinson's disease), liver fibrosis, coaquiation disorders (e.g. hemophila), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of definitions incisions and ulcers. The proteins are also useful for tissue regeneration, for wound healing and in the treatment of definitions and conditions and ulcers. The proteins are also useful for definitions and ulcers. The proteins are also the proteins are also regulating heamatopolesis, for treating myeloid or lymphoid cell

The invention relates to secreted proteins (AAY17219-228) encoded by CC polynucleotides obtained from human fetal kidney, adult lung, adult kidney, adult brain, adult blood, adult testes, and fetal brain and murine adult bone marrow cDNA libraries. The secretd protein nucleic acid sequences (X6801-811) correspond to clones bd306-7, g3283-6, C 411 clones are deposited as ATCC 98699; The PNS and proteins are corresponded activities which would make them suitable corresponds, although no supportaing medical conditions in humans and animals, although no supportaing data is given. Suggested activities include nutritional activity, cytokine and cell conditions in humans and include nutritional activity, immune stimulating (e.g. as vaccines) or suppressing activity, immune stimulating e.g. as vaccines) or suppressing activity, hematopoiesis regulating activity, chemotactic/chemotactic activity, inhibin activity, calluting inhibin activity, chemotactic/chemotactic activity, and tumour inhibition activity. The PNS are allowed the parent activity and tumour inhibition activity. The PNS are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ..

Secreted human proteins, useful as vaccine for treating various diseases such as autoimmune disorders (e.g. multiple sclerosis), and nervous system disorders (e.g. stroke) -

Claim 13; Page 471; 619pp; English.

The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation or cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of various immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in graft-versus-host diseases (GVHD), in the induction of tumour immunity, myloid or Iymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers; as well as in treatment of periodontal disease, osteoperosis or osteoparthitis, mediated by of periodontal disease, osteoporosis or osteoarthritis, mediated by inflammatory processes, diseases of the peripheral nervous system, Alzhaimer's, Parkinson's disease, Huntington's disease, amylotrophic lateral sclerosis, and Shy-Drager syndrome, infections, infarction of cardiac and central nervous system vessel e.g. stroke, sepsis, inflammatory bowel disease, ulcers, bone regeneration. The protein, having activin- or inhibin-related activities is useful as a contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence encodes a secreted protein of the invention
